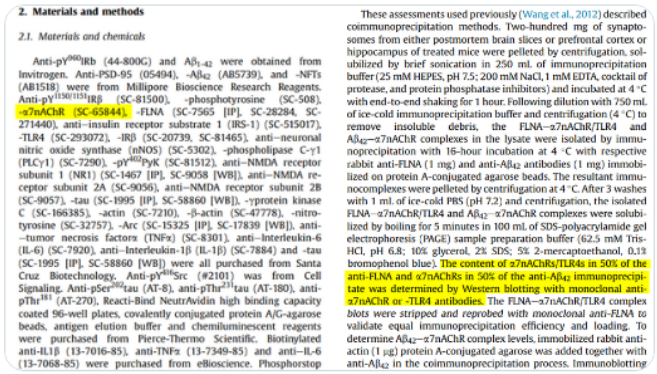
"An antibody to a1 does not match with the a7 nAChR right?" - True

"But SAVA cited papers using an a1 nAChR antibody to detect a7 nAChR in the brain, right?" - False. Here are some screenshots from the 2017 study.



2. Materials and methods

2.1. Materials and chemicals

Anti-pY[990]IRb (44-800G) and $A\beta_{1-42}$ were obtained from Invitrogen. Anti-PSD-95 (05494), -$A\beta_{42}$ (AB5739), and -NFTs (AB1518) were from Millipore Bioscience Research Reagents. Anti-pY[1150/1151]IRβ (SC-81500), -phosphotyrosine (SC-508), -α7nAChR (SC-65844), -FLNA (SC-7565 [IP], SC-28284, SC-271440), anti-insulin receptor substrate 1 (IRS-1) (SC-515017), -TLR4 (SC-293072), -IRβ (SC-20739, SC-81465), anti-neuronal nitric oxide synthase (nNOS) (SC-5302), -phospholipase C-γ1 (PLCγ1) (SC-7290), -pY[402]PyK (SC-81512), anti-NMDA receptor subunit 1 (NR1) (SC-1467 [IP], SC-9058 [WB]), anti-NMDA receptor subunit 2A (SC-9056), anti-NMDA receptor subunit 2B (SC-9057), -tau (SC-1995 [IP], SC-58860 [WB]), -γprotein kinase C (SC-166385), -actin (SC-7210), -β-actin (SC-47778), -nitrotyrosine (SC-32757), -Arc (SC-15325 [IP], SC-17839 [WB]), anti-tumor necrosis factors (TNFα) (SC-8301), anti-Interleukin-6 (IL-6) (SC-7920), anti-Interleukin-1β (IL-1β) (SC-7884) and -tau (SC-1995 [IP], SC-58860 [WB]) were all purchased from Santa Cruz Biotechnology. Anti-pY[416]Src (#2101) was from Cell Signaling. Anti-pSer[202]tau (AT-8), anti-pThr[231]tau (AT-180), anti-pThr[181] (AT-270), Reacti-Bind NeutrAvidin high binding capacity coated 96-well plates, covalently conjugated protein A/G-agarose beads, antigen elution buffer and chemiluminescent reagents were purchased from Pierce-Thermo Scientific. Biotinylated anti-IL1β (13-7016-85), anti-TNFα (13-7349-85) and anti-IL-6 (13-7068-85) were purchased from eBioscience. Phosphorstop

These assessments used previously (Wang et al., 2012) described coimmunoprecipitation methods. Two-hundred mg of synaptosomes from either postmortem brain slices or prefrontal cortex or hippocampus of treated mice were pelleted by centrifugation, solubilized by brief sonication in 250 ml. of immunoprecipitation buffer (25 mM HEPES, pH 7.5; 200 mM NaCl, 1 mM EDTA, cocktail of protease, and protein phosphatase inhibitors) and incubated at 4 °C with end-to-end shaking for 1 hour. Following dilution with 750 mL of ice-cold immunoprecipitation buffer and centrifugation (4 °C) to remove insoluble debris, the FLNA–α7nAChR/TLR4 and $A\beta_{42}$–α7nAChR complexes in the lysate were isolated by immunoprecipitation with 16-hour incubation at 4 °C with respective rabbit anti-FLNA (1 mg) and anti-$A\beta_{42}$ antibodies (1 mg) immobilized on protein A-conjugated agarose beads. The resultant immunocomplexes were pelleted by centrifugation at 4 °C. After 3 washes with 1 mL of ice-cold PBS (pH 7.2) and centrifugation, the isolated FLNA–α7nAChR/TLR4 and $A\beta_{42}$–α7nAChR complexes were solubilized by boiling for 5 minutes in 100 mL of SDS-polyacrylamide gel electrophoresis (PAGE) sample preparation buffer (62.5 mM Tris-HCl, pH 6.8; 10% glycerol, 2% SDS; 5% 2-mercaptoethanol, 0.13 bromophenol blue). The content of α7nAChRs/TLR4s in 50% of the anti-FLNA and α7nAChRs in 50% of the anti-$A\beta_{42}$ immunoprecipitate was determined by Western blotting with monoclonal anti-α7nAChR or -TLR4 antibodies. The FLNA–α7nAChR/TLR4 complex *blots were stripped and reprobed with monoclonal anti-FLNA* to validate equal immunoprecipitation efficiency and loading. To determine $A\beta_{42}$–α7nAChR complex levels, immobilized rabbit anti-actin (1 μg) protein A-conjugated agarose was added together with anti-$A\beta_{42}$ in the coimmunoprecipitation process. Immunoblotting

correct as long as AH was telling the truth there. Or are you saying he lied there?

This Post was deleted by the Post author. Learn more

**MagnificentAnswer** @MagnificentAnsw · Nov 21, 2021
Did the calls take place? Did anyone on the calls continued "the bait" or whatever else? Or were there real calls just using FDA criminal investigator numbers... if they're indeed that? No matter what, just side noise, but interesting.

2

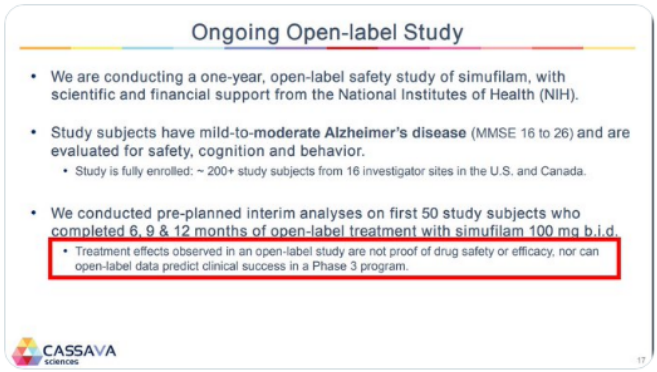
**Adrian H** @Adrian_H · Nov 21, 2021
I was punking the jackass who was trying to impersonate Bik, and I made it very, very obvious. It turned out better than I could have possibly hoped for.

1 4

**MagnificentAnswer** @MagnificentAnsw · Nov 21, 2021
That's a twist, but it's still in realm of noise, either side of it. Cognition improved at 6, 9, & 12 m reported by multiple sites. At 12 m, 2 statisticians had direct access to data and analyzed and confirmed. Biomarkers improved, no placebo effect there. $SAVA #Bullish

1

**Adrian H** @Adrian_H · Nov 21, 2021
GMAFB $SAVA



2 2

**Adrian H** @Adrian_H · Nov 21, 2021
and the biomarker data.. IT'S ALL MADE UP

1 1

**MagnificentAnswer** @MagnificentAnsw · Nov 21, 2021
Is there a definitive proof to this statement above? Or you're going on a hunch?

1

This Post was deleted by the Post author. Learn more

**MagnificentAnswer** @MagnificentAnsw · Nov 21, 2021
"Surely you know". "Please don't call me Shirley" 🙂
This punch still doesn't land at the cognition improvement and I have no reason to doubt the lab that reported improvements. BTW, the data, if I remember correctly, is by Quanterix, and the analysis is by the company.

## Post

This punch still doesn't land at the cognition improvement and I have no reason to doubt the lab that reported improvements. BTW, the data, if I remember correctly, is by Quanterix, and the analysis is by the company.

1

**Adrian H** @Adrian_H · Nov 21, 2021
No, the company rejected the biomarker data from Quanterix because it showed nothing was happening, and got Wang to make up the "re-do".

2 1

**MagnificentAnswer** @MagnificentAnsw · Nov 21, 2021
and speaking of "re-do", I wouldn't call it that either 'cause it appears it was not the same samples that were re-analyzed, but a 2nd, pristine set, that got re-analyzed... presumably by Wang if WSJ is correct. Just to be clear on terminology of "re-do".

2

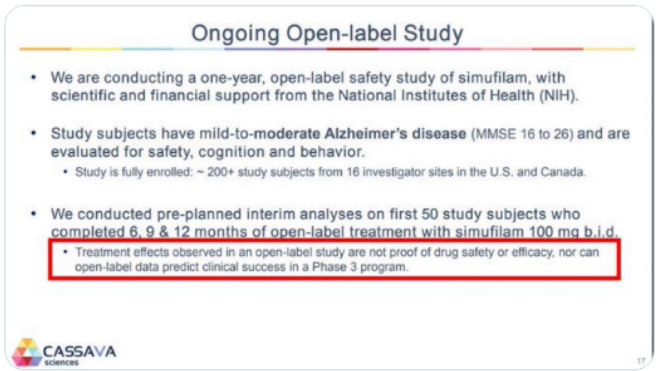
**William J. Cooke** @CookeWJ1 · Nov 21, 2021
OK, this is getting confusing! Why would anyone expect "Wang," whoever he is to, get different results from the first lab. Independent testing labs can't risk their reputation and credibility by giving one client a "wink and a nod".

1 1

**MagnificentAnswer** @MagnificentAnsw · Nov 21, 2021
Are you accusing some lab of giving a wink and a nod? While it'd be interesting to see supporting proof, what I am looking at is the cognition data improvement @ 6, 9, & 12 mo, increasingly so. 2 independent statisticians with direct data access analyzed & confirmed.

2

**Adrian H** @Adrian_H · Nov 21, 2021
ah, that cognition data



1 2

**MagnificentAnswer** @MagnificentAnsw · Nov 21, 2021
I like the cognition data improvement, what can I tell ya?! The data look awesome to me. Absolutely awesome. Even FDA must've been impressed to give them a go ahead with ph3 trials. #somethingaboutdataBullish . $SAVA #Bulllish In my opinion.

3 4

**Arka** @arkabagchi24 · Nov 21, 2021
Yeah those p-hacked cognitive score data with absurdly loose exclusionary criteria and a strange decision to do OL before CL (more so susceptible to placebo effects) would yield so much horseshit data it would make anyone #bullish at face value

Yeah those p-hacked cognitive score data with absurdly loose exclusionary criteria and a strange decision to do OL before CL (more so susceptible to placebo effects) would yield so much horseshit data it would make anyone #bullish at face value

1 3

**MagnificentAnswer** @MagnificentAnsw · Nov 21, 2021
ah, the use of jargon, of course. Who wouldn't like that. 🙂 I guess I'll just have to wait for ph3 data reveals! Man, what if they shorten the trial & say the efficacy is just overwhelmingly clear? The show will be shortened. Oh well. As long as the stock moons to $4,000. 🙂 🚀🍿

2 2

**Gully Foyle** @bluejaunt100 · Nov 21, 2021
Let $SAVA put their confidence on display. Add a futility analysis for both P3's with a publicly announced DSMB, like $BIIB did. And you seem "knowledgeable." Then you know the cognition data cannot be interpreted without the full analysis set. Ask Lindsay when you see her.

1 2

**MagnificentAnswer** @MagnificentAnsw · Nov 21, 2021
They've put confidence on display by starting 2 ph3 studies and CMS study back in May-June. If it were not for FUD, they'd have higher pps and could afford a few more expansions into other space, e.g. Parkinson's, etc. Their patents are excellent. $SAVA #Bullish In my opinion.

1 2

**Gully Foyle** @bluejaunt100 · Nov 21, 2021
That is a non-answer and incorrect. The P3 w/o an interim is an attempt by $SAVA to delay getting an answer. Again, why have they never presented all the data - the FAS - and why no interim analysis. Surely they want to rush this medicine to patients everywhere. Try again.

2 4

**MagnificentAnswer** @MagnificentAnsw · Nov 21, 2021
#FDAisSatisfied

1

**Gully Foyle** @bluejaunt100 · Nov 21, 2021
So you can't answer? Understood. Nice hashtag tho.

1 1

**MagnificentAnswer** @MagnificentAnsw · Nov 21, 2021
So I just did by pointing to what I view as important for success.

1 4

**Gully Foyle** @bluejaunt100 · Nov 21, 2021
Let's agree you don't understand data or why a FAS is needed, and don't understand that FDA SPA process does not involve data audits or prior review. But understood you'll say whatever to justify $SAVA lack of transparency.

1 4

**MagnificentAnswer** @MagnificentAnsw · Nov 21, 2021
Nah, let's not agree on that, but I am open to agreeing that we'll disagree on that, though I suspect that deep down (maybe not even that deep down?) you know full well that I know data. Irrelevant, though, for success of the company.

that deep down?) you know full well that I know data. Irrelevant, though, for success of the company.

1 1

**Gully Foyle** @bluejaunt100 · Nov 21, 2021
Last post. Agree you know data well enough to avoid answering directly about the lack of full analysis set. So you are complicit. It exposes $SAVA for what they are, and no deflection on your part avoids that major flaw in your or early $SAVA claims, which they retracted.

1 7

**MagnificentAnswer** @MagnificentAnsw · Nov 21, 2021
No. Let's learn to focus by remembering: Cognition improved @ 6, 9 & 12 mo. @ 12 mo no placebo effect likely. 2 Independent statisticians w/ DIRECT access to data analyzed & confirmed. Behavior score improved. Biomarkers improved, objective data, no placebo effect. $SAVA #Bullish

2

**MagnificentAnswer** @MagnificentAnsw · Nov 21, 2021
Nice try at a diversion and, at the very same time, accusation of a diversion. As I had stated before: "What they accuse you of, they're doing it themselves". Proves to be the case over and over again. Back to what's important for ph3 trial (and FDA approval): Cognition.

1 4

**Arka** @arkabagchi24 · Nov 21, 2021
Let's talk about the cognitive scores! Why did the February cognitive baseline data change so dramatically upon patient mix change, that you would have a less than 0.1% chance of selecting patients with cognitive scores that extreme ?

1 2

**MagnificentAnswer** @MagnificentAnsw · Nov 21, 2021
Glad you want to talk cognition data. Why did 2 independent statisticians with DIRECT access to data analyzed & confirmed spectacular results?

Magnificent Answer: 'cause the data are real!

In my opinion.

2 4

were not independent statisticians before you try to throw mud at that? It doesn't stick, I'll tell you that.

No obfuscation found by me. The statements by SAVA stand. In my opinion.

Your opinion does not equal fact. Unless you can provide documentary evidence that you can get into their heads and know it for a fact. Can you provide those?

If you doubt something, present facts for why those 2 statisticians are not independent. If you don't have such facts, then... oh well?

I'm so happy, actually, that you guys again veer off the cognition data and into anything else, but the cognition data. Shows me you still haven't found a way to lay a glove on it. Spectacular data, eh? $SAVA #Bullish

**Adrian H** @Adrian_H · Nov 21, 2021
The cognition data were not the basis for considering the Ph2 “successful” and justifying doing a Ph3. Cognition was a purely a marketing stunt to sell the stock. The actual endpoint of the Ph2 were the biomarkers, because $SAVA knew those could be faked by the great Wang.
2 5

**MagnificentAnswer** @MagnificentAnsw · Nov 21, 2021
Have you checked the actual primary endpoint of ph3 trials? It may be an interesting revelation for you, it sounds like. $SAVA #Bullish
2

**Arka** @arkabagchi24 · Nov 21, 2021
What about the cognitive data primary endpoint for Ph3 is so #bullish to you? Haven't you just read a few arguments that would suggest $SAVA has absolutely no way of meeting that endpoint ?
1 2

**MagnificentAnswer** @MagnificentAnsw · Nov 21, 2021
Au contraire. I think $SAVA has excellent chances at succeeding in ph3 trials on those stellar cognition data in ph2 further aided by improved behavior score further aided by biomarkers. #Bullish In my opinion.

But we are contending that the cognition data was heavily massaged using 1) OL before a CL Ph3, which is rare and concerning since cog improvements are susceptible to placebo 2) deliberately selecting patients to reflect improvement in cog when there wasn't any

2 2

**Jesse brodkin** @jesse_brodkin · Nov 21, 2021
The cognition results were not statistically significant and unpublishable, apparently.

2 4

**MagnificentAnswer** @MagnificentAnsw · Nov 21, 2021
then you don't have to be afraid that ph3 will be successful, though I PERSONALLY think that ph3 trials will be successful. I guess we disagree. #FDAwillDecide

@jesse_brodkin

Allowing an obvious fraud like $sava to continue to take advantage of patients, investors and families makes a mockery of our regulatory framework and markets. 50:50 Remi ends up behind bars.

I'm interested in odds of the drug succeeding. This is what matters to millions of current and future patients. This is what matters to investors. This is what matters to me. I think I'm liking the odds. $SAVA #Bullish
